

**CHICKENS**

New Hampshire poultry numbers were excluded from publication beginning in 2009 to avoid disclosure of individual operations. New England totals for 2009 - 2013 are not comparable with previous years.

New England's chicken inventory on December 1, 2013 totaled 6.84 million birds, down 2 percent from the previous year's count of 6.95 million birds. Egg-laying hens (layers) accounted for 6.19 million birds,

or 91 percent of the total inventory. Maine was the largest contributor to New England's chicken inventory, accounting for 53 percent of the total birds and 57 percent of all layers in the 4-State region. Total inventory value of all chickens in the four States was placed at \$19.6 million in 2013, compared with \$19.9 million in 2012. These totals do not include chickens of meat-type strains (broilers) raised for commercial meat production.
